EXPRESS CLEARANCE

Pilot

What is it?

WHAT IS EXPRESS CLEARANCE?

Express clearance is a digital and automated solution. All relevant information about goods and vehicle is sent to and processed by Norwegian Customs before the vehicle reaches the border.

The driver drives through an express lane at the customs office and is usually not required to stop. The goods are automatically cleared once the vehicle has passed

ADVANTAGES FOR THE BUSINESS SECTOR

- Drivers don't usually need to stop when passing the border
- The goods reach their destination more quickly, thereby reducing logistics costs
- The information flow is wholly digital and trackable
- Automatic processes and less manual actions free up time
- Offers optimal framework conditions for serious enterprises

THREE-STEP EXPRESS CLEARANCE

Before passing the border

1
Electronic submission
of information

The carrier (or authorised party) submits the following:

- Declaration data
- Manifest information about the vehicle with references to goods
- Supporting documents

2
Processing and
risk assessment of
information

Norwegian Customs will assign a status to each transport.

When passing the border

3
Automatic border
passing and goods
clearance

Driver:

- **Green light:** Drives past the customs office without stopping
- **Red light:** Stops and reports to the office
- Automatic goods clearance

Would you like to use the express option?

The solution is currently offered at Ørje and Svinesund Customs offices.
